Insights & Methodology

Major Observations:-

- Hotel XYZ company recorded the highest procurement spend.
- Supplier TELANGANA STATE BEVERAGE CORPORATION LIMITED accounted for the largest share of procurement spending.
- Category **Butchery** contributed the highest overall spend.
- Pepsi procurement was concentrated in **Pepsi Can, 7UP Can, and Soft Drink** products.
- Kimberly-Clark procurement was mainly driven by **Scott, Bathroom Tissue, and Toilet Roll** products.
- Procurement spend peaked during **December (Month 12)**.
- A small number of suppliers contributed a significant share of total spend.

Business Recommendations:-

- Negotiate pricing with the highest-spend suppliers.
- Review the top 10 products contributing to procurement costs.
- Standardize purchasing across hotels to improve buying power.
- Monitor monthly procurement trends to identify seasonal demand.
- Regularly review supplier performance and pricing.
- Implement automated procurement dashboards for ongoing monitoring.

Methodology:-

1. Collected procurement data from four Marriott hotels.
2. Standardized column names across all datasets.
3. Removed duplicate records.
4. Handled missing values and corrected data types.
5. Consolidated all datasets into a single master dataset.
6. Created Month, Quarter, and Year fields for time-based analysis.
7. Filtered Pepsi and Kimberly-Clark products using the supplied product lists.
8. Performed data analysis using Python (Pandas, NumPy, Matplotlib, Seaborn).
9. Built interactive dashboards in Power BI for business reporting.

For a larger environment covering 400+ hotels:

- Use standardized data templates for all hotels.
- Automate data collection using Power Query or ETL pipelines.
- Store procurement data in a centralized SQL database or data warehouse.
- Schedule automated Power BI refreshes.
- Maintain master data for suppliers and products.
- Implement validation rules to ensure consistent data quality.
- Use a reusable Power BI dashboard with role-based
